

# CODE JOURNEY

***Week 6***

<CodeCrew/>

**New week, new challenges**, and when I say NEW, it's really in the true sense of the word. This week was different from the others, because we didn't have a new course, so no "in-class work", no "graded-class". The challenges of this week were bigger : **we started to make big projects.** The first project of the week, made by **Kenn**, was given to us monday in the morning, and we had to return it at noon, so 4 hours for the 1st project. In the afternoon, we did our 2nd project, this time made by **Kevin**, for 4 hours as well. It was just a training, to prepare us for the future. Because from the following day (Tuesday), the big project of the week was the following: A Portfolio.

This project brings together all the front end that we learned. From Tuesday to Friday, we had to come to class, make progress in our project and give an account of the work done in the morning and the work done in the evening.

The presentation of the project will be done next Monday. My project is ready I hope it satisfies for my instructors.
